

PitDry™ HDD

Description: PitDry™ HDD is designed to solidify bentonite based drilling fluids for disposal purposes.

Recommended Use: PitDry™ HDD is used as a part of a simple process to remove drilling fluids from the job site to the disposal site as a solid.

Characteristics:

- The PitDry™ HDD process allows the contractor to take drilling fluid from the pit and divert it directly from the PD-300™ machine to a dump box for transport to landfill or dumpsite.
- Environmentally safe – does not change mud chemical characteristics.
- Works in a wide pH range and wide percent solids content.
- Dry powder.

Mixing and Applications: PitDry™ HDD is intended to be used with the PD-300™ machine.

Application rate: 2% by weight for bentonite drilling fluid weighing < 11 lbs/gal

0.5 – 1% weight for bentonite fluids with weight > 11 lbs/gal

Packaging: 50 lb bags
